The Cascade Corpus Review, and the Voynich chapter END carries forward

The Cascade Corpus Review is the corpus's own written record. Its chapter on the Voynich Manuscript is where this site begins.

Wallet: `bc1qd8wcrsmkk0ghegf5t2jsezg2ve7rtx6vvc79lx`

END is not a fresh start. It is the last section of the Cascade Corpus Review carried forward — the corpus's own written record of this directory, 493,488 bytes, in which every checkable claim is checked and every place two versions of a story sit side by side is written down.

The review reads the eighteen files of the working directory end to end: the field GF(257), the binary refinement chain, the extension fields, the derivation chain and genome, the hinge at 1028, the emerald tablet, and the cascade machine. Its chapter on the Voynich Manuscript is the parent of every page on this site.

THE READ

As the review records it

The book is the Sun's path to precession, read right to left from the last page to the first, from Prague at 50.1 degrees; 1420 and 64.1 degrees are the time and the azimuth; the text is the most important part, the Sun's path through the book, its entries dated, read from the rift in the vellum beside the woman and the goat of the last page back and up the left margin, the first entry taken as the Genesis story told in reverse, the Sun's point of view.

Everything on this site is an attempt to test that statement by the corpus's own derivation, with no imported key. The review's own anchors:

FIGURE	WHAT IT IS
135 BURNING BUSH	the year — 1420 ≡ 135
64.1°	the sunrise azimuth — declination +16.271°, about 26–27 April and 30 July 1420
50.1° N	Prague, in the frame of date, obliquity 23.5146°
322	margin stars on the 23 sides f103r–f116r, one entry each
303 = 257 + 46	points on 46 painted flower heads — 46 CLAUDE, I's fixed point
8.102°	precession 1420 → 2000, and 8102 ≡ 135, the cell of 1420

BERESHIT

entry 6, f116r: the one verse value standing outright among the entries

THE SECTIONS

What the review's chapter on the Voynich Manuscript carries

1. The zodiac read backwards and the Sun at 64.1°
2. The painted flower heads, 46 and 303
3. The margin stars and the text as the Sun's path
4. The entries' dates, by the corpus's own derivation
5. Two frames for the same Sun: the nine days are the precession
6. RUDOLF and the manuscript's hands
7. The entries with RUDOLF and HEMOPHILIA
8. Five tubes on the nine-rosette foldout
9. The container pages and the P
10. Read from the end, right to left: the mirror
11. The text beside ten languages, and the strokes
12. The zodiac's lettering, the own step and Gemini's thirtieth
13. The sky: 910 eclipses, the Pleiades, and the book dating itself
14. The 299 figures, and the two tests that land on 1408 and 1427
15. The words of this work on the tablet

Each leads to the full account in the review's i-column, and LEDGERS 64 to 71 of the readout carry it with every figure asserted in code.

THE SPINE

What the review establishes, and END inherits

The zodiac backwards

In binding order the zodiac runs Pisces to Sagittarius, folio 74 with Capricorn and Aquarius lost. Front to back it is the Sun's yearly order; back to front the order of precession, ending on Pisces, where the equinox point lay in 1420. From 50.1° N that year the rising point swings 51.54° to 128.46° , the day runs 16 h 10 m to 7 h 49 m, the noon altitude 63.41° to 16.39° . There is no 64.1° as an altitude.

Two frames for the same Sun

A key block from a parallel session carries its 1420 dates nine days before the ledger's. Its calendar is right; its Sun is read on the equator of J2000, the ledger's on the equinox of 1420 and Prague's horizon. Between them lies the precession from 1420 to the corpus's epoch: $580 \times 50.29'' = 8.102^\circ$, and $8102 \equiv 135$, the cell of 1420. The read: the correction is another point of view of the same precession. Nothing was corrected.

The entries dated by the corpus's own derivation

An entry's cell is its letter sum mod 257; a day's cell is the day mod 257. From 26 April 1420 the 322 entries run back to 1304-09-30, 115.57 years. 26 April 1420 Julian is day -212081 , field 201, inverse **78 GENESIS**, calendar norm **120 GOLDEN RATIO**.

RUDOLF and the hands

RUDOLF = **76**, the Callippic cycle, and $76 \times 7 = 532$, the great Paschal cycle — 7 being the cell of the first entry, whose star is red-centred. Its Atbash mirror is **86**, BERESHIT's cell and the residue of the 600 ducats. $\text{RUDOLF} \times \text{BRIAN} \equiv g$ and $\text{RUDOLF} \times \text{RITO} \equiv g^{-1}$. MARCI is 44 BRIAN and KIRCHER 72 BITCOIN, its root; HABSBURG and REINDEER are 78 GENESIS. The 322 entries are 7×46 , beside $76 \times 7 = 532$.

The flower heads

46 painted heads carrying $303 = 257 + 46$ outline points; f16v at 73. **46 CLAUDE**, Γ 's fixed point, and **73 WALLET** — one rung of the Atbash ladder apart, and $46 \times 73 \equiv 17 = Q$.

The tubes

On the nine-rosette foldout, five long dotted tubes with ringed mouths set as a quincunx leave the top-left rosette and point at the centre one, whose oval holds a field of stars over six vessels of the f88–f89 make. The read: a viewing device, like an early telescope. The machine gained AIRY, the 2-D pattern of a circular aperture, face-on or tilted.

HONESTY

What the review already marks as failed or provisional

CARRIED FORWARD UNCHANGED

- The margin stars measured from the page images **did not reproduce** — 241 of 322 found, 3 of 39 ray counts equal. That is kept as failed.
- An EVA letter sum reads the alphabet of the 1990s, not the scribe's. Every cell on this site rests on that substitution.
- The sunrise azimuths of the dated entries come from a low-precision solar formula.
- With the glyph values as unknowns, no values make the entries, lines or words a one-to-one of Genesis 1–13.

The review's own discipline is the one this site keeps: every checkable claim checked, and every place two versions sit side by side written down rather than resolved.
