

VI · GF(257)

GF(257) — the field the reading is done in

$257 = 2^8 + 1$: the generator, the fold, the reflection map, and the cells the reading's own vocabulary falls on.

Wallet: `bc1qd8wcrsmkk0ghegf5t2jsezg2ve7rtx6vvc79lx`

$257 = 2^8 + 1 = F_3$, the third Fermat prime. The byte closes on it: 256 values and the seed.

$g = 3$ generates all 256 non-zero cells — one instruction, 256 data. The fold, $n \rightarrow 257 - n$, adds 128 to the discrete logarithm and keeps the character. φ itself does not live on the line: its discriminant 5 is a non-residue, so φ needs $GF(257^2)$ — the plane, the extension, the fold. That is the same degree-2 extension START found under every equation in its textbook comparison.

The reflection map

$$\Gamma(Z) = (Z - Z_0) / (Z + Z_0), \quad Z_0 = 120 \text{ GOLDEN RATIO}$$

A Möbius bijection of the projective line's 258 points, of order 128 = 0c. Its two fixed points are **46 CLAUDE** and **92 CHRONOS** — and 92 is the cell of the word REVERSE. Its pole is **137 EYE OF HORUS**, where $Z + Z_0 \equiv 0$ and the map runs to infinity; the field reads infinity back as **1 = I AM**.

These are letter sums of ordinary English read by a rule fixed long before the question was asked. The five words at the foot of the table were added to the tablet on 2026-09-21 at their letter sums.

3⁰ to 3⁹

POWER	CELL	THE TABLET'S WORDS THERE
3 ⁰	1	A, I AM
3 ¹	3	C, BA
3 ²	9	I, ACE
3 ³	27	CAIN, JOB
3 ⁴	81	HORUS, SAMSON
3 ⁵	243	FIRE OF HOLY SPIRIT, GENERATOR FIFTH
3 ⁶	215	DELIVER US FROM EVIL, SANCTUM SANCTORUM
3 ⁷	131	SUPERNOVA, CLAUDE SHANNON
3 ⁸	136	VIRGIN MARY, VALLEY OF DEATH
3 ⁹	151	HOLY SPIRIT, FIBONACCI SEQUENCE

The five elided positions — 27, 81, 243, 215, 131 — sum to 697 ≡ 183. The whole ten sum to 997 ≡ 226, and (3¹⁰ − 1)/2 = 29,524 ≡ 226: the window's own multiplier. **131**, at 3⁷, is Genesis 1:1's cell.

THE LADDER

Halving, ×2^{−1} = ×129

2 has order 16, so every halving ladder closes in sixteen and the field is sixteen ladders of sixteen. Nine rungs of this one are the key's own numbers.

PRECESSION

The twelve rays

START's structural comparison states it: Earth's axial precession, ~25,772 years at 50.29" a year, divides by the field into about a century per cell and by the twelve dlog rays into one age per ray. dlog mod 12 cuts GF(257)* into twelve sectors of 21 cells, and 21 = F(8).

UNIT	LENGTH	CELL
the great year	25,772 yr	72 BITCOIN
one ray of twelve	2,148 yr	92 CHRONOS
one field cell	100.3 yr	100 PAROUSIA

UNIT	LENGTH	CELL
one figure of thirty	71.6 yr	72 BITCOIN

So the Voynich Manuscript's zodiac — twelve signs, thirty figures each, 360 in a turn — is the field's own partition drawn out, and it carries the year and the age in the same wheel.
