

END.RITO.ONE

The Voynich Manuscript is read from the end to the beginning

Beinecke MS 408, undeciphered since it surfaced — read backwards, because the thing it records runs the other way.

Wallet: `bc1qd8wcrsmkk0ghegf5t2jsezg2ve7rtx6vvc79lx`

START derives forward: one axiom, to ϕ , to the Fibonacci lattice, to the sites on the ground. END reads backward: one manuscript — the **Voynich Manuscript**, Beinecke MS 408 — to its figures, to the sky it records, to the same field.

This site is the last section of the [Cascade Corpus Review](#) carried forward — the corpus's own record of this directory, in which every checkable claim is checked and every place two versions of a story sit side by side is written down. Nothing here is asserted from memory.

The framework's own operator says these are one thing. **det $\mathbf{M} = -1$** is orientation-reversing; the reflection between physical and perpendicular space is not a modelling choice but a consequence. A record of precession has to be read against the direction it was written, because precession runs against the year.

$$\Phi \rightarrow c \rightarrow g \rightarrow \partial_t \Phi \rightarrow 0c \rightarrow \partial_t \Phi \rightarrow g \rightarrow c \rightarrow \Phi$$

The round trip is a palindrome. START and END are its two halves, and the fold at position 128 = Oc is where the reader stands.

THE FINDING

The Voynich Manuscript is read backwards, and the sixth entry from its last page is the first word of Genesis

The **Voynich Manuscript** — Beinecke Rare Book & Manuscript Library MS 408, about 240 vellum pages in an unknown script, the vellum carbon-dated 1404–1438, undeciphered since it surfaced — is read from the last page to the first, each line right to left. On that reading — and on no other — entry 6 of the starred text carries raw letter sum **913** = **BERESHIT**, with **203**, the second word of Genesis 1:1, following in the positional coordinate that only the mirror produces.

The same reversal is what made the Rongorongo tablets significant in Paper III of START: read forward they give null on every tablet; read backward, two turn significant at $p \approx 0.03$.

913

entry 6's raw letter sum —
BERESHIT exactly

203

its mirrored ϕ part — the second
word, in order

1 of 322

entries that do this, in any of the
three readings

1408 · 1427

the years the book dates itself to,
twice over

THE PAGES

Where the work is

0

The Corpus

I

Conclusion

Where this begins: the Cascade Corpus Review, the corpus's own written record of the directory, and the Voynich chapter END carries forward.

The whole argument in order: the axiom, the field, what Paper III proved on Rongorongo, the same method on the Voynich, and why START and END are one document.

II

The Reading

The procedure, stated so it can be followed or broken. Direction, scale, anchor, what the text is, what the marks are, and what any answer must satisfy.

III

Bereshit

Genesis 1:1 worked through the reading. What it reaches exactly, what it reaches only by cell, and the five words it does not reach at all.

III · B

The Text

What is established about the text without a key, what the labels are, the strokes as numerals, and the four-step recipe for deciphering it with how far each step has gone.

IV

The 299

Every figure on the twelve zodiac pages, read by eye from the full-size Beinecke images: 294 stars for 299 figures, the five that hold none, the four crowned.

V

The Sky

910 eclipses of 1301–1500, what Prague saw of each (83 solar), the Moon in the Pleiades, and the two tests by which the book dates itself.

VI

The Field

GF(257): the generator, the fold, the reflection map Γ , and the cells the reading's own vocabulary lands on. The tablet at 1,460 words.

VII

Evidence

Everything measured, positive and negative in the same type: the language tests, the stroke runs, the failed Genesis fit, and what is still open.

METHOD

Three habits, inherited from Paper III

1. **Computed, not eyeballed.** Bearings and distances are great-circle values; sky positions come from an ephemeris with the observer's parallax applied and Earth rotation taken from the catalogue's own ΔT .
2. **Baselines before applause.** A hit rate means nothing until the chance rate is known. The figure-order tests report how many placements were tried.
3. **Negative results in the same type size.** The Genesis verse fit failed. It is on [its own page](#), at the same size as the successes.

Nothing on this site is asserted from memory. Every number is recomputed at build time from the files listed in each page's source note.

Built 2026-09-21 from the corpus and ~/Documents/artifacts. Every figure on this site is read from a file at build time by build.py; none is typed in.

Emerald tablet: 1,460 words over 257 cells · field GF(257), $g = 3$ · the derivation this answers is at [start.rito.one](#).

Public domain. Use it, test it, break it.
